# VERSATILE APPLICATIONS

TOPSOIL

PADDING PIPELINE & CABLE EXCAVATION

STABILIZATION

COMPOSTING

INDUSTRIAL APPLICATIONS

RECYCLING

SCREENING PEAT

MINE CLEARANCE

## OUTSTANDING SCREENING RESULTS WITH BLADE SCREEN TECHNOLOGY

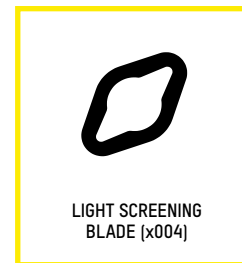

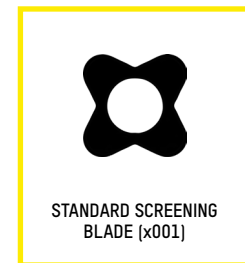

- Superior efficiency with topsoil, compost, and peat

- Effective even with moist material that cannot be processed with trommels or vibrating screening technology

- Cleaning scrapers prevent clogging and maintain high quality of the screened material

### BLADE DESIGN

Screening blades genuinely separate material without breaking stones or other hard particles into the screened material.

Aggressive blades push the coarse material through the screen and make it finer.

Ideal for the following applications:

- Mixing compost
- Mincing the particle size
- Breaking grass clumps or lumpy chemical materials
- Crushing materials like coal, roof tiles, some asphalt and glass.

### PARTICLE SIZE

Particle size of screened material is approximately 7mm smaller than the blade spacing.

BLADE SPACING mm	PARTICLE SIZE mm
15	0-8
20	0-13
24	0-17
30	0-23
34	0-27
40	0-33
50	0-43
64	0-57
74	0-67
95	0-88

\* Notice that the screening result may vary due to the properties of the material

### EL 2085

REMU'S smallest screening bucket the EL 2085 weights just 240 kg and is suitable for small wheeled loaders and mini excavators.

The model is only available with 20 mm blade spacing.

# XO SERIES

## CHANGE THE MODULE INSTEAD OF THE BUCKET

The Crossover bucket is a totally new concept for the attachment sector: one bucket frame with multiple work modules enables a quick transition between different jobs. This bucket is the perfect choice if you process several different materials.

One Frame

Several Modules

Multiple Applications

## CROSSOVER BUCKET

Developing different blade screening modules is what we are best at – we are experts in the field.

By offering modules with several blade spacings, and with crushing blades, our customers can process all materials without buying multiple buckets.

- Achieve various tasks with the same bucket frame
- Process different materials, e.g. topsoil or compost
- Change the whole screening technique from blade screen to vibratory screen, or vice versa
- Alternate between crushing and screening

## WORK MODULES

### BLADE SCREEN

- Screening topsoil
- Padding pipelines and cable excavations
- Mixing soil, sand and fertilizers
- Landscaping
- Screening peat
- Soil stabilization

### SCREENER CRUSHER

- Grinding organic material (grass lumps and roots)
- Mixing and separating compost
- Grinding various packed materials
- Crushing roof tiles

### VIBRATING SCREEN

- Separation of sand from paving stones for reuse
- Screening sand or other loose and dry materials
- Shaking waste and dirt out of recyclable material

### CONCRETE MIXER

- CM module + safety grill
- Scoop the sand or gravel directly from the pile
- Add cement & water
- Mix and transport to desired place
- Discharge trough the opening in the bottom

## EE & EP SERIES

EE and EP buckets are designed to maintain an optimal ratio between the mass and volume of the bucket, saving the lifting capacity of the machine for the material itself.

- ❑ Can be fitted to tractors, telehandlers, wheeled loaders and excavators

- ❑ Bucket volumes from 1 m<sup>3</sup> up to 5.5 m<sup>3</sup>

# FOR THE ROUGHEST JOBSITES IN THE HARDEST CONDITIONS

## SERIE PD

PD buckets were originally engineered for pipeline padding, but can perform in any demanding application where reliability and an extra strong structure is required.

Move large rocks and help excavator movements, this bucket is designed for the most harshest of job sites.

## EX 140

### RENEWED CLASSIC

This classic bucket model has been fabricated over 20 years. Over the years it has been redesigned with modern high strength steels and engineering expertise, and it is now ready to be facing even harder challenges.

- ❑ Suitable for excavators 16 tons and above

# COMBI E8

# COMBI E8

Combi E8 is a compact screening plant with blade screen technology. Its robust structure makes it suitable for various applications including processing waste materials, compost and topsoil.

## SCREENING ELEMENT

- Screening element has 13 rotors made with wear resistant steel
- Length of the screening element is 2500 mm
- Width of screening table is 950 mm
- The angle of the screening element can be adjusted to ensure the optimal quality of screened material and the highest capacity

### EASY TO OPERATE

- Loading height is only 2850mm
- Track mounted plant is fast to move around job site

### TRANSPORTABILITY

- Foldable conveyors
- Compact transportation measurements: height 2950mm, width 2500mm, length 8500mm

### ENGINE UNIT

DIESEL GENERATOR	55.4 kW (74hp)
TRANSMISSION	4 INDIVIDUAL HYDRAULIC CIRCUITS

### MATERIAL FEEDING

HOPPER VOLUME	3.0 M <sup>3</sup>
HOPPER LENGTH	3500 MM
BELT WIDTH	1200 MM
FEEDING HEIGHT	2850 MM
FEEDER CAPACITY	300 M <sup>3</sup> /H

### MATERIAL DISCHARGE

DISCHARGE HEIGHT OF FINE MATERIAL CONVEYOR	3000 MM
DISCHARGE HEIGHT OF SIDE CONVEYOR	1500 MM

### MAX. THROUGHPUT

DEPENDENT ON MATERIAL **	UP TO 250 (M <sup>3</sup> /H)
--------------------------	-------------------------------

### EXTRA OPTIONS

Different screen options for fine screen, tipping grid above feeder, fragmentor to crush soil lumps, folding conveyors, feeder system for fertilizers or stabilizers, radio remote control, central lubrication and more.
